APPLICATION / INSTALLATION

Stud Wall Construction - Durasheath-3 applied to the exterior or interior face of wood or metal studs, to cover all studs, sills, plates and header constructions, provides a layer of continuous insulation (ci) over details not normally covered by insulation products. It may be secured to the framing or structural sheathing with bugle-head screws, galvanized roofing nails or common nails driven through cap washers. Quality-grade construction adhesives may also be used to secure the Durasheath-3 on interior applications. Exterior facades may include brick/stone veneer, exterior siding and stucco. Durasheath-3 must be covered on the interior with a minimum 1/2" gypsum wallboard interior finish that is mechanically attached.

Cavity Wall Construction (Brick Veneer) - Durasheath-3 is an excellent cavity insulation product fitting between the masonry block and finished brick veneer of any residential or commercial project. It may be secured to the dry face of the masonry block wall with a quality grade construction adhesive. Durasheath-3 can be cut to fit between masonry joint reinforcements placed to tie the brick veneer to the concrete block back-up and installed horizontally in strips to allow the wall ties to extend beyond the face of the insulation leaving the proper air spaces as required.

Masonry Wall Construction - Durasheath-3 is applied to either the exterior or interior face of concrete or concrete masonry walls to provide a layer of continuous insulation (ci) over the entire surface. It may be secured to the inside face of a concrete or concrete masonry wall, over or under the furring strips, and covered with a minimum 1/2" gypsum wallboard interior finish. Adhesives may be used to hold the Durasheath-3 in place against the wall temporarily. However, this attachment is temporary until the furring strips and gypsum wallboard are installed. The furring strips and gypsum wallboard must be secured with suitable screws or nails.

Exterior Stucco Construction - Durasheath-3 may be used as the insulative sheathing under hard coat stucco finishes. It may be secured to the studs with bugle-head screws, galvanized roofing nails or common-nails driven through cap washers. Cover the Durasheath-3 with a suitable separation layer such as an organic or inorganic felt. Then, attach conventional metal wire lath and expansion joints with appropriate fasteners as dictated by the local Building Code. Rmax does not recommend the direct attachment of stucco, such as Portland cement or polymer-modified types, directly to the face of the insulation product. Consult stucco manufacturers for details.

Re-Siding Construction - Durasheath-3 may be used in retrofit construction provided the existing siding is sound and solidly attached. It is secured with galvanized nails of sufficient length to penetrate the old sidings, sheathings below and at least one inch into the existing wall studs. Then, cover the Durasheath-3 with a suitable new siding of aluminum, vinyl, fiber cement, wood or wood fiber based products.

Vaulted Ceiling Construction - Durasheath-3 may be applied to the inside face of the roof rafters in vaulted ceiling construction to provide a layer of continuous insulation (ci) and increase the R-value of the roof. Simply nail the Durasheath-3 to the face of the rafter, cover with a minimum 1/2" gypsum wallboard and finish.

Attics and Crawl Spaces - Durasheath-3 may be applied to the interior face of stud walls or roof rafters within attics and crawl spaces to provide a layer of continuous insulation (ci). Simply nail the Durasheath-3 to the framing members and cover with an approved ignition barrier such as 3/8" gypsum wallboard or 1/4" wood structural panel, particle board or hardboard.

Roofing Construction - Durasheath-3 is laid over a suitable roof deck such as tongue-and-groove timber, plywood or metal deck and covered with a suitable layer of plywood, wafer board or OSB. Asphalt or wood shingles, concrete or clay tiles or a standing seam metal roof may be installed over the insulated roof deck according to the roofing system instructions. NOTE: It may not be necessary to cover the insulation with a nailable surface when used under a standing seam metal roof assembly, consult manufacturer for details.

LIMITATIONS

Durasheath-3 is not recommended, nor warranted, for use as a commercial roof insulation directly under membrane systems. Consult Rmax Sales for suitable commercial roof insulation products.

Durasheath-3 is not a structural panel. It must not be used as a nailing base for any other building products. Furthermore, stud walls insulated with Durasheath-3 must be properly braced for lateral loads according to the requirements of local Building Codes.

WARNING

DO NOT leave Durasheath-3 exposed. Polyiso foam is an organic material which will burn when exposed to an ignition source of sufficient heat and intensity and may contribute to flames spreading.

Installations utilizing Durasheath-3 must be fully protected on the interior side of the building by a thermal barrier such as a minimum of 1/2" gypsum wallboard. Masonry or concrete that is a minimum of one inch thick, plywood that is a minimum of 1/2" thick and wood that is a minimum of one inch nominal thickness may also be recognized as suitable thermal barriers. Consult your local Building Official for specific governing codes and requirements.

The interior and/or exterior of the building should be protected with a suitable vapor retarder and/or a water resistive barrier, if required, based on local Building Codes and climate zone.
