

UltreX™
durable aesthetic composites

Paper, Linen, and Canvas Micarta® Glass Epoxy G10

UltreX™ Micarta® Knife Handle Material *manufactured exclusively in the USA*

Now available in several different colors, combinations, and surface treatments, UltreX™ paper, cotton phenolic, and glass-epoxy materials use the original production methods of Westinghouse, updated with today's process and environmental controls. And unlike other "micarta" available in the market, UltreX™ Micarta® is produced in the USA.

Paper Micarta®

Micarta® was the original knife handle material. But before that, it proved its toughness and durability in demanding electrical and mechanical industrial applications. Pioneered by the Westinghouse company for use in power generating and utility scale transformers, the Micarta® brand became synonymous with a specific style of laminated composite — paper and cotton fabric reinforced phenolic.

UltreX™ Glass Epoxy G10

Brilliant Colors, Extreme Toughness, Durability, and Chemical Resistance

G-10 was originally an industrial material. It has proved its toughness and durability in challenging electrical and mechanical device applications. Built from durable fiberglass and epoxy resin, and formed under high temperature and pressure, G-10 is unlike other polymers — it won't melt. G-10 is a rugged, resilient, reliable material suitable for a variety of uses, including aesthetic ones.

Now available in several different colors, combinations, and surface treatments, UlteX™ G-10 materials use the same production methods relied upon by the most demanding applications in, on, and above the earth. And unlike other G-10 available in the market, UlteX™ G-10 is produced in the USA.

Founded in 1984, Professional Plastics is a family-owned and operated plastics distributor and fabricator focused on providing our customers the best selection, prices and service. We currently maintain 19 full-scale stocking locations throughout the USA, Singapore & Taiwan and have become the largest supplier of high-performance engineering plastic shapes in North America & Asia. Whether you are looking for plastic sheets, rods, tubing, films, profiles, and fabricated parts, we have the people, products and services to meet your needs. We offer more than 1,000 plastics, laminates, ceramics & specialty alloys, along with datasheets, and machining guides for your review.
